

CareerPilot — MVP Monitoring Dashboard

SIMULATED DEMO DATA

Monitoring whether users reach CareerPilot's contextual decision-support experience and perceive it as useful.

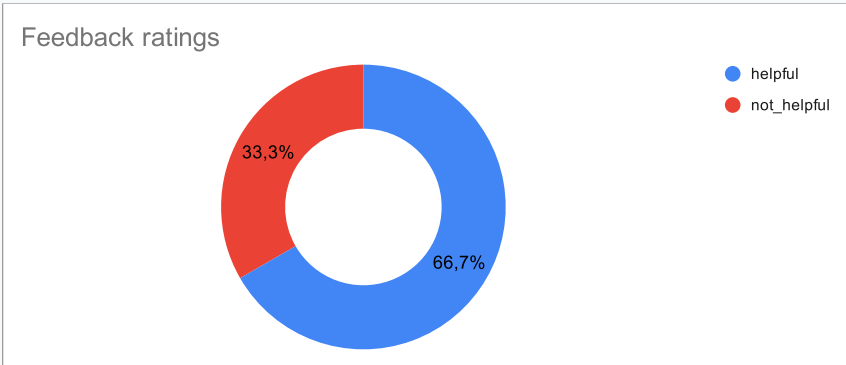

Primary Product KPIs

Recommendation Usefulness Rate	Recommendation Review Rate	Recommendation Feedback Coverage	Context Readiness Rate
66,7%	62,5%	60,0%	75,0%
4 of 6 feedback ratings are helpful	10 of 16 shown recommendations reviewed	6 of 10 reviewed recommendations rated	6 of 8 activated users are context ready

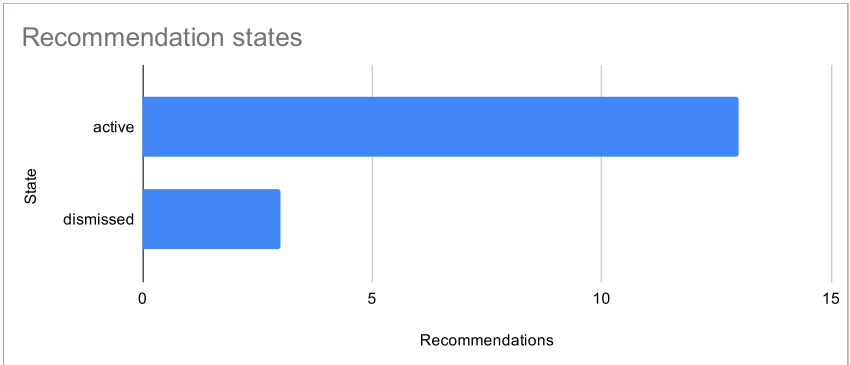

Recommendation Experience — Observed Counts

Activated Users	Context Ready Users	Recommendations Shown	Recommendations Reviewed	Feedback Provided	Helpful Recommendations
8	6	16	10	6	4

Recommendation Feedback

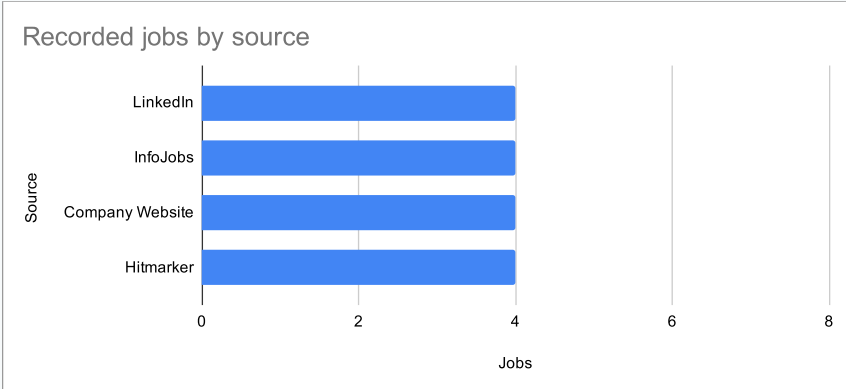

Recommendation State

Job-Search Outcomes — Observational

Recorded Applications	Interview Rate	Offer Rate	Accepted Offer Duration
16	25,0%	6,3%	35
All recorded applications	4 of 16 applications reached interview	1 of 16 applications reached offer	Avg. days from first recorded application

Jobs by Source

Monitoring Narrative

Review cadence — Check instrumentation after each validation session; interpret the KPI set after each validation round.
Good movement — More users become context ready, review recommendations, provide enough feedback, and rate recommendations as helpful.
Bad movement — Falling readiness or review, insufficient feedback coverage, or lower usefulness signals friction or weak recommendation value.
Decision — Strong usefulness with sufficient coverage supports Continue / Strengthen. High review but low usefulness triggers recommendation-quality/context iteration; low review with healthy readiness triggers presentation/relevance iteration; low readiness triggers setup/context simplification. Hiring outcomes remain observational.

SIMULATED DEMO DATA — fallback data for presentation and dashboard testing. Replace the rows in Data_Source with equivalent real Lovable/Supabase exports when available; the dashboard formulas will update automatically.
